

# Platform API

The UKG Dimensions™ platform provides a powerful application programming interface (API) and documentation to help you develop secure, scalable, high-performance applications that leverage the full breadth of capabilities offered by our back-end services.

Build integrations and apps to connect enterprise systems, add supplemental apps, and automate routine tasks fueled by the robust application programming interfaces offered in Dimensions.

## Automate. Flex. Extend.

Our collection of flexible, RESTful, and on-demand APIs includes prebuilt connectors for people, payroll, accruals, and more. The Dimensions extensible platform allows any application you build to access your workforce data, from a mobile companion app to a full-featured client unique to your organization and its needs.

## Supportive tools and resources

Through the Developer Portal, builders can dive right in and get started in a few simple steps:

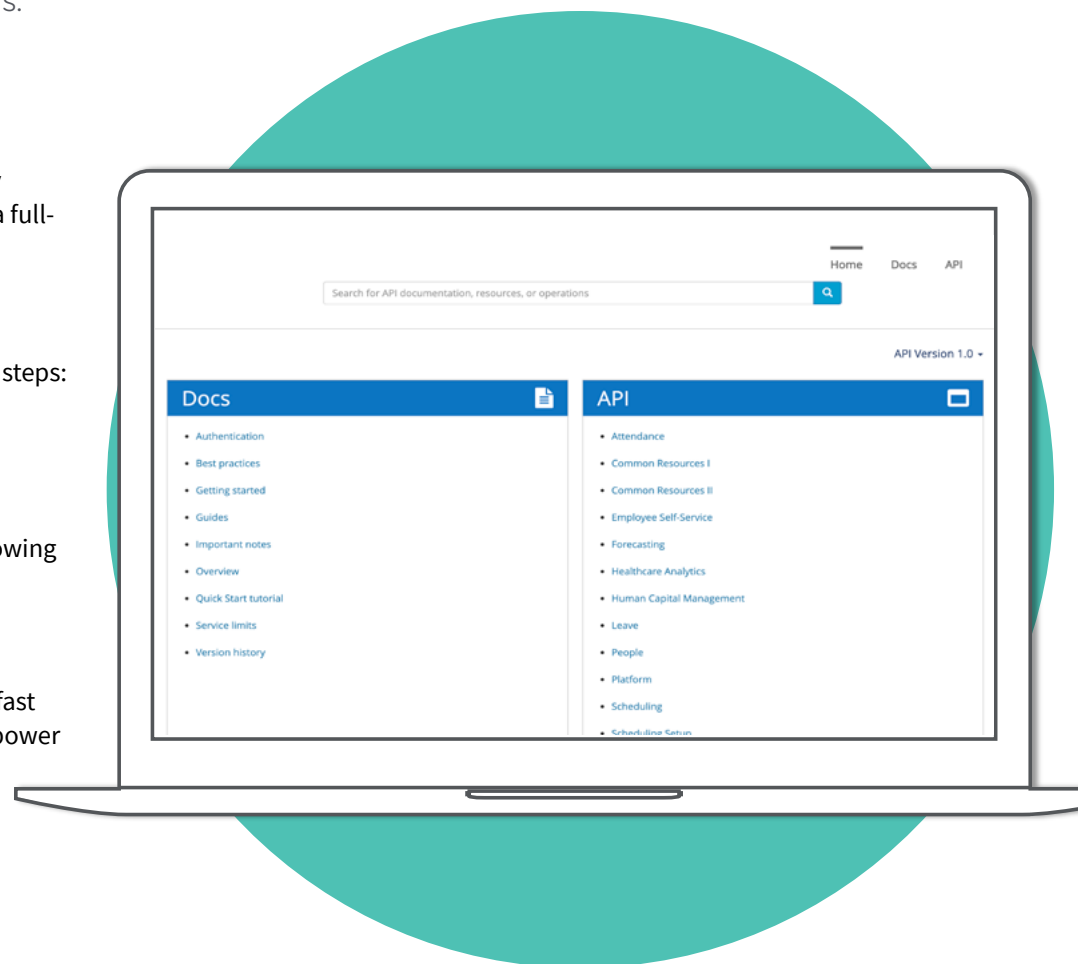

1. Review documentation and resources
2. Review available APIs and learn what data can be leveraged
3. Head back to Integrations Setup and start building

Assemble and deploy integrations and apps in a fraction of the time it used to take, allowing you to see real business results.

## Powered by the D5 Platform

The D5 platform is an open, modern platform that leverages the Google Cloud for ultrafast computing performance in today's fast-paced world. Combining the cloud computing power and robust APIs, your integration builders can:

- Build simple or complex integrations unique to your business needs
- Connect HR, payroll, benefits, point-of-sales, apps, and other systems
- Accelerate integration time to value
- Synchronize real-time data across systems
